## INTRODUCTION

### GENERAL

This document provides all the information needed to install, evaluate and deploy this KWizCom product:

- Product Overview
- Installation Guide
- User Guide

## PRODUCT OVERVIEW

*KWizCom Touch* is a SharePoint 2013/2016 & SharePoint Online add-in (app) that provides you with a SharePoint interface redesigned to fit to your hand-held device.

This responsive UI displays different layouts depending on what exact device you are using, so you will have the most convenient UI optimized to your device.

Menus, buttons, links and the entire user experience becomes much easier to use, faster to accomplish your tasks.

## KEY FEATURES

<https://store.office.com/en-001/app.aspx?assetid=WA104379419>
- Install the free version. This version includes a message that indicates that this is a free trial version.

## USER GUIDE

### GETTING STARTED

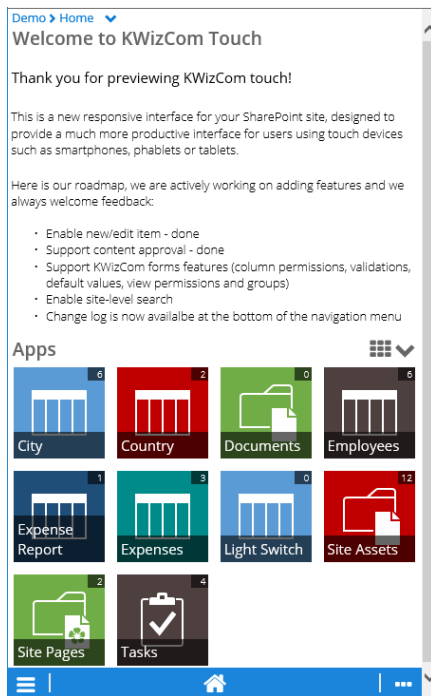

After you add KWizCom Touch app to your site, all you have to do in order to browse your site using a hand-held device is add **“/t”** to the url.

So, if your site looks like this when you use SharePoint’s out-of-the-box mobile view (using /m):

It will show this same layout and menu location at the bottom, no matter what device you are using.

When you browse the same site using **“/t”** suffix, this is what you will get:

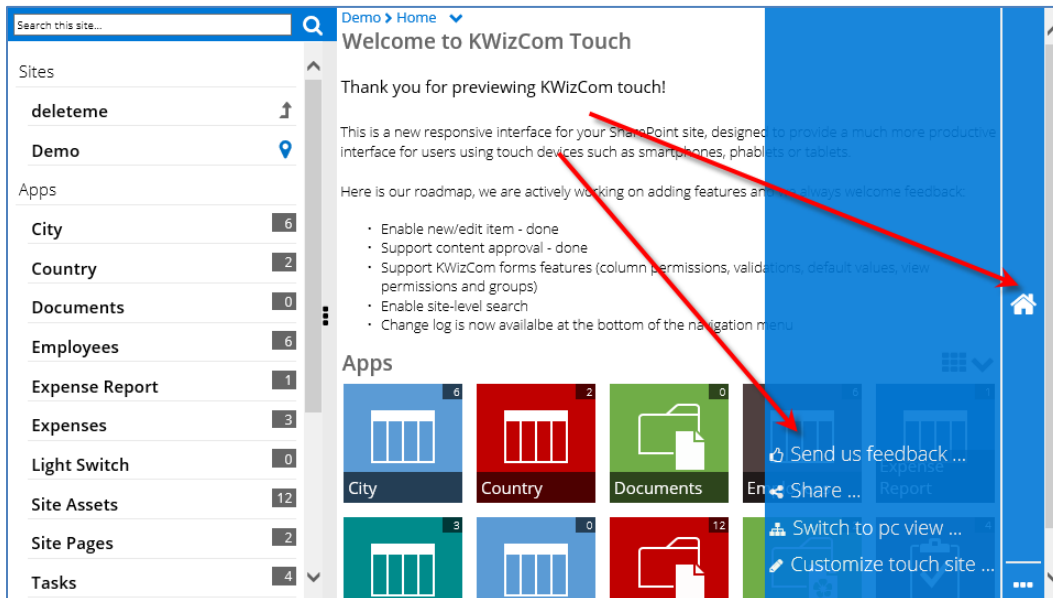

If you rotate your device, or use a device with a bigger screen, as expected from a responsive UI, you will see the menus located in different locations – optimized to the location of your hands that hold the device, and additional parts become visible as the available screen permits:

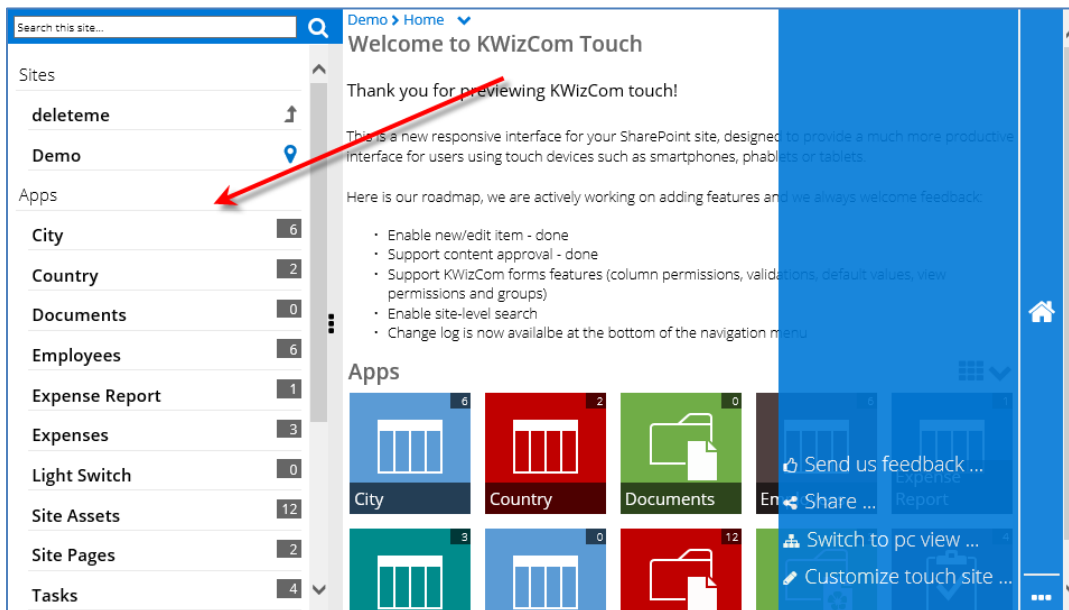

OK, so when using a smartphone, menus appear at the bottom of the screen enabling you to work with a single hand like expected with a smartphone, right?

However, when using a tablet, usually held with two hands, menus appear on the right side, enabling you to select the required options more conveniently:

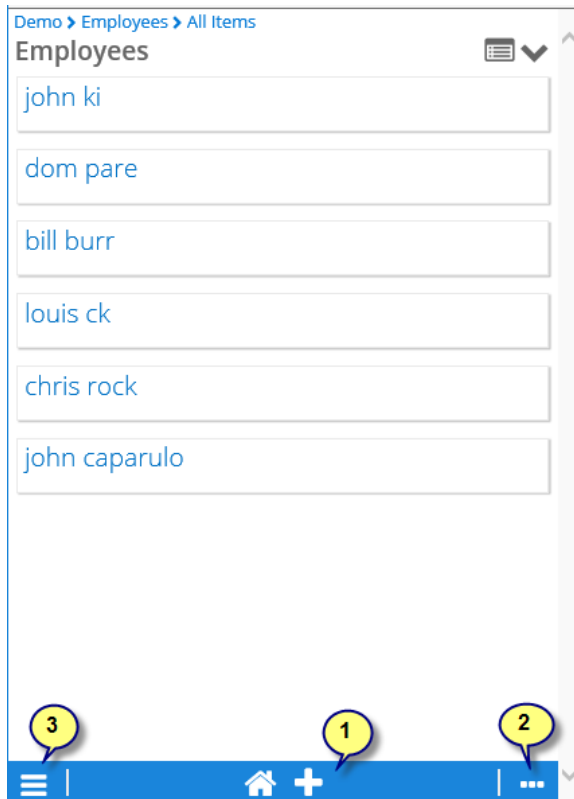

On the left side of the UI you can see the navigation pane showing apps and sub-sites:

## GENERAL MENUS

KWizCom Touch includes the following menus/navigation means that appear no matter which page you are browsing:

(1) Main Actions Bar -

This bar shows the most commonly used actions such as “home” .

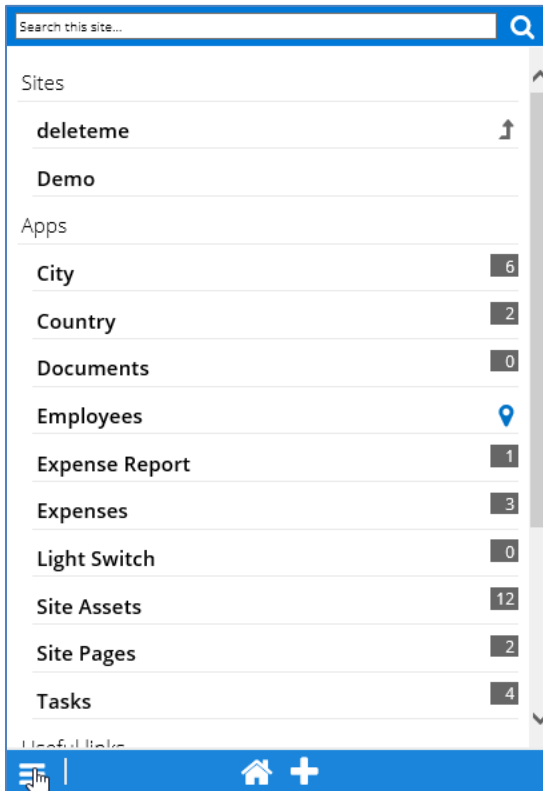

Depending on which page you browse, you will see different common actions that are relevant to your current page (list view, library view, item etc.)

(2) Secondary actions -

When clicking the Secondary actions menu , you will see additional actions that are relevant to the current viewed page.

(3) Hamburger menu -

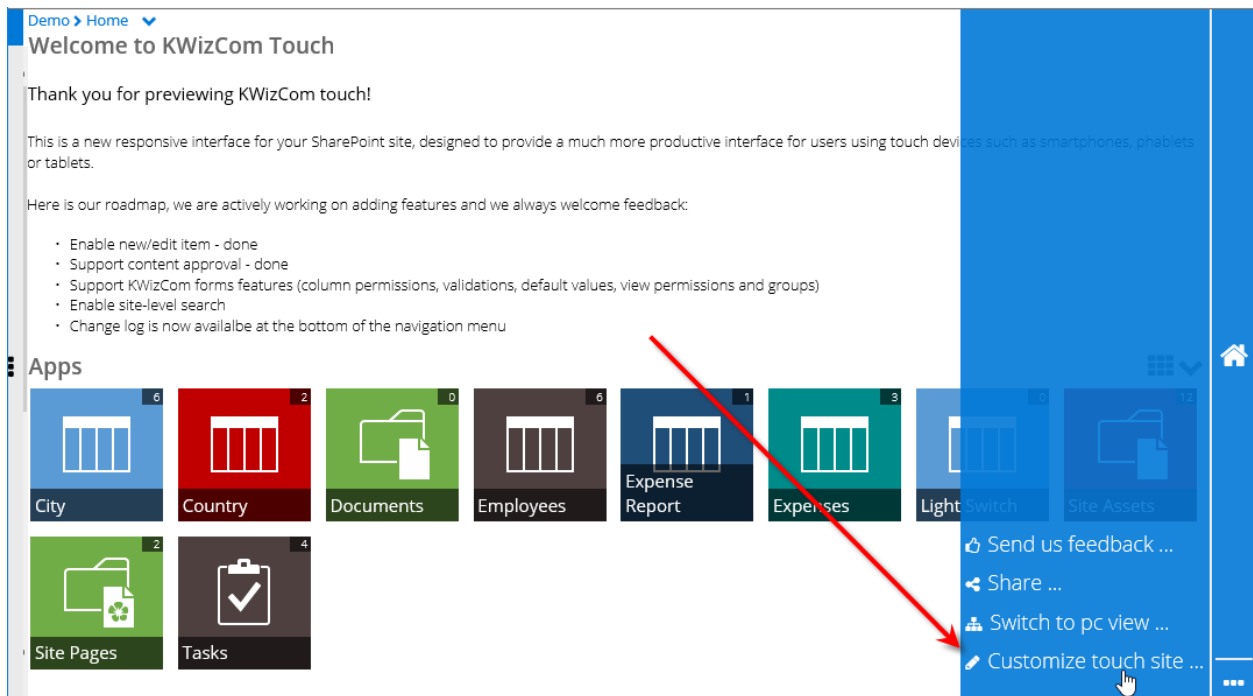

When your device screen size is too small to show the navigation pane, you will see the hamburger menu . Clicking it will show the navigation pane:

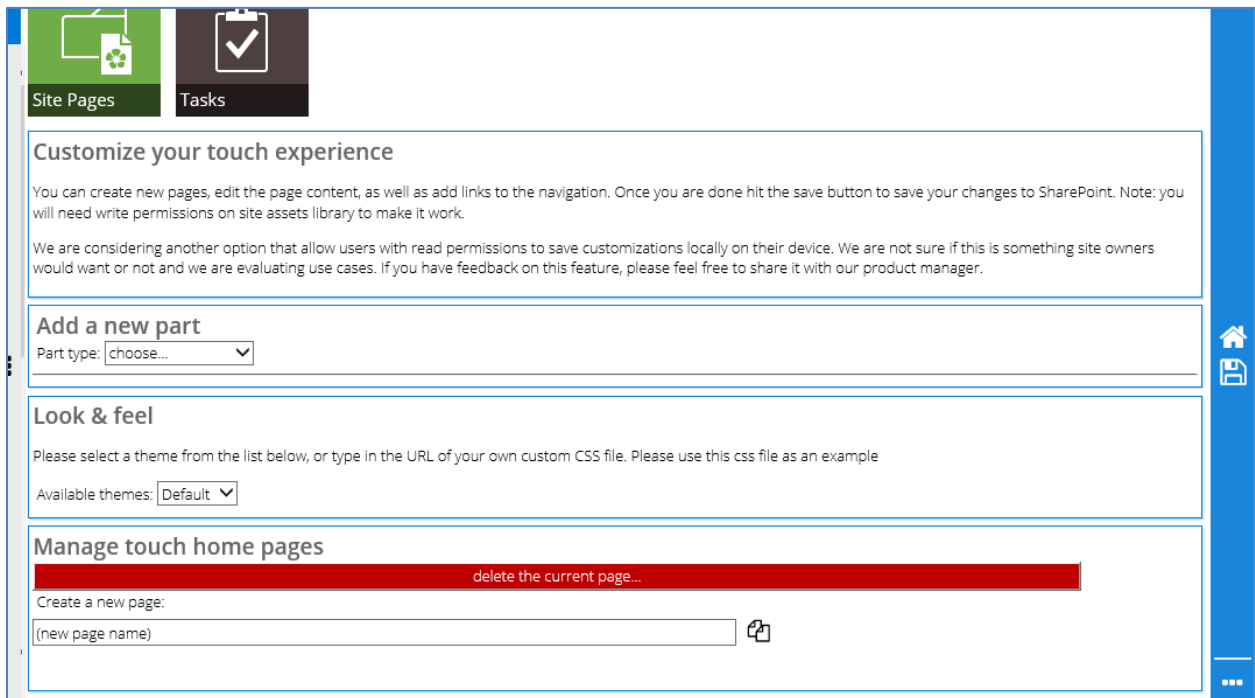

## CUSTOMIZING YOUR TOUCH HOMEPAGE

In addition to showing the out-of-the-box SharePoint pages in a more convenient responsive layout, KWizCom Touch also enables you to customize your mobile home page.

To customize your home page, click the secondary actions menu and then click “Customize touch site...”:

After clicking this menu you will see additional settings section added to the page:

Using this settings page you change the page theme, add additional custom mobile pages and add page parts to any of your custom pages.
