## Introduction

**KWizCom Remote List Viewer web part** is the best solution to display lists that are located on other SharePoint sites.

This document provides all the information needed to install, evaluate and deploy this KWizCom product:

1. Product overview
2. Installation guide
3. Component activation
4. Administrator guide

## Product Overview

SharePoint, by default, can't present lists web parts from other sites. For example, employees from one department can't view a list that is located on other departments' SharePoint sites.

When using the **KWizCom Remote List Viewer web part** in your SharePoint site, you can display remote lists that are located on other SharePoint sites, and even on other SharePoint servers (on the same server farm).

The Remote List Viewer web part looks like the regular SharePoint List web part:

Also, you can manage the displayed items (edit, view properties etc.) - same way as with the regular SharePoint list web part.

In addition, the Remote List Viewer web part displays the remote list's available views, enabling users to toggle between views (not available with the SharePoint list web parts).

## Key Features

<b>Feature</b>	<b>KWizCom Remote List Viewer</b>	<b>SharePoint 2010-2016 out-of-the-box</b>
View and manage SharePoint lists/libraries located on other sites/web application/servers (on the same farm).	✓	
Enable users to toggle between views of the remote list.	✓	
Hide the toolbar of the remote list	✓	

# Installation

## Software prerequisites

### Server Requirements

1. SharePoint 2010-2016

### Client PC Requirements

1. Windows 7+
2. Microsoft Internet Explorer , Microsoft Edge, Mozilla Firefox, Google Chrome  
– all latest versions.

## Installation Procedure

### SharePoint 2010-2016

1. Log in as SharePoint administrator account to your SharePoint front-end server.
2. Download the product's latest evaluation version (zip file) from KWizCom's internet web site. This evaluation version is fully functional for 30 days.
3. Extract the downloaded zip file into the same folder on your SharePoint's disk.

You will need now to install and deploy these standard SharePoint WSP packages. This can be done by using SharePoint's stsadm/Powershell tools, according to Microsoft's guidelines for installing WSP packages.

4. **For a much quicker automatic installation**, right-click the Powershell script file "**SP-WSPsInstaller.ps1**" and select "Run with Powershell". This will start the automatic installation and deployment process.
5. At the end of the installation process, you should see all packages deployed in the Central Admin "Server Solutions" page, and the KWizCom SharePoint

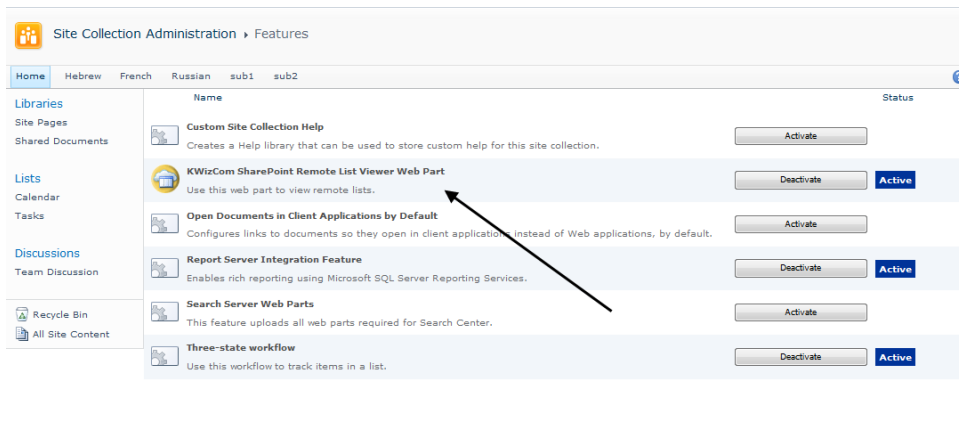

Foundation package should be deployed also in the Central Admin web application.

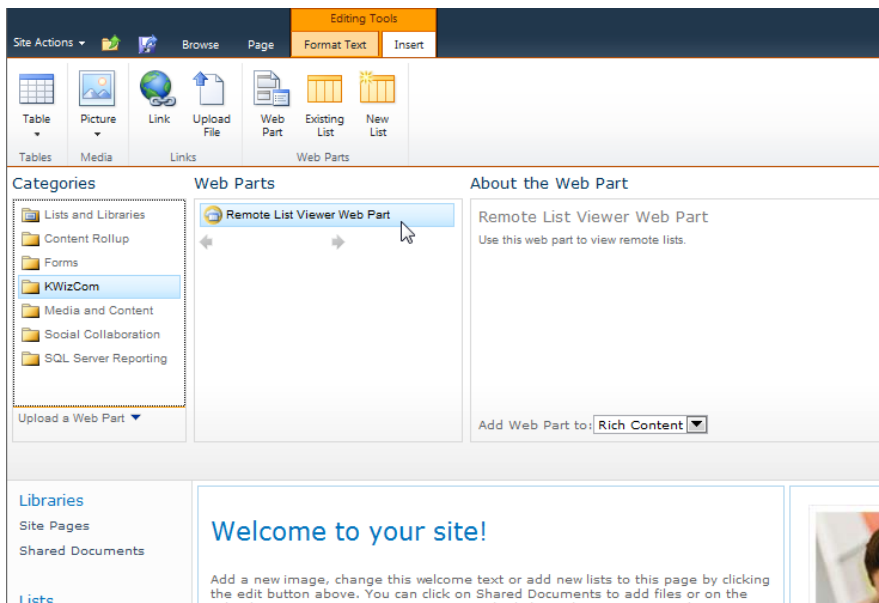

## Post Installation

### SharePoint 2010-2016

1. After completion of the installation you will need to activate the “KWizCom Remote List Viewer web part” site collection feature in the site collections where you want the web part to be used:

2. Once the site collection feature has been activated, you will be able to use the SharePoint Remote List Viewer web part, that will be available in the web part gallery, under the “KWizCom” category:

## **Un-installation**

### **SharePoint 2010-2016 server**

1. Retract and remove the solution using SharePoint central admin or by using stsadm/powershell command line.

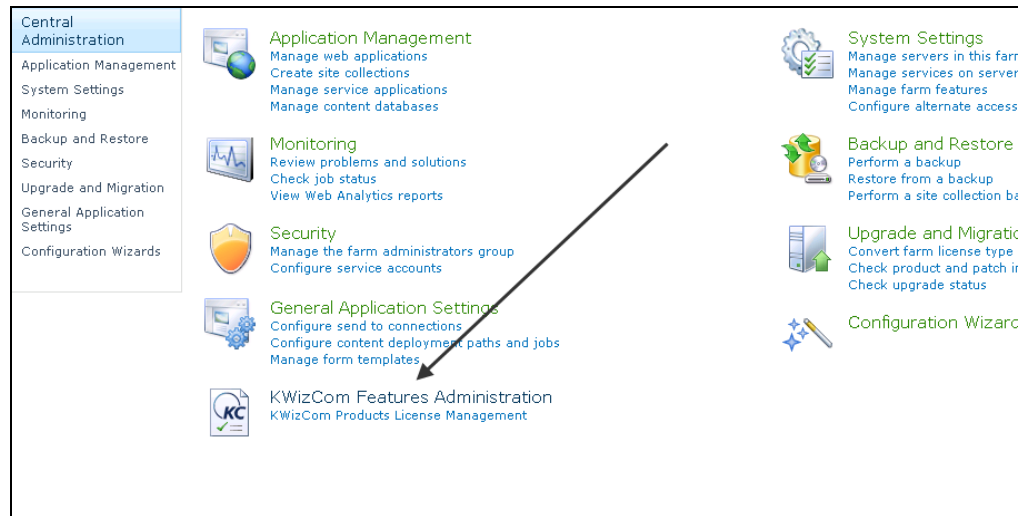

## Component Activation

KWizCom components are available for evaluation prior to purchase. This way you can try our components and verify that they indeed meet your needs. An evaluation version for each KWizCom component contains all features of the component's production version. The only difference is that an evaluation version is time-limited, and will operate for a period of one month.

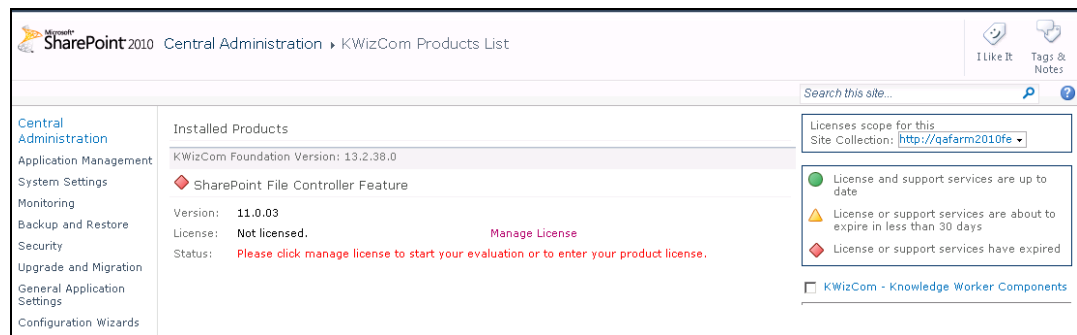

Once you decide to order a KWizCom component, you will need to follow the following steps:

### SharePoint 2010-2016

1. Order the product on the KWizCom website – [www.KWizCom.com](http://www.KWizCom.com), or contact our sales team at [sales@kwizcom.com](mailto:sales@kwizcom.com).
2. After the order was made, you can activate your installed evaluation version. Activation is done by the following steps:
  - a. Open SharePoint Central Admin. On the main "Central Administration" page, you will see the "KWizCom Features Administration" icon:

- b. Click the KWizCom Features Administration icon. You will be redirected to a page that allows you to manage all your installed KWizCom products' licenses:

- c. Click the "Manage License" link next to the product that you wish to activate. You will be redirected to that product's license management page:

That's it! Your product is now fully activated.

# Administrator Guide

## Introduction

When you browse your SharePoint server/ Windows SharePoint services site, a new Remote List Viewer web part can be added from "Miscellaneous" group in the "Add Web Part" dialog or from "Server gallery" in the "Advanced Web Part Gallery".

## Web Part Properties & Configuration Options

The following sections provide details about each category.

### Errors

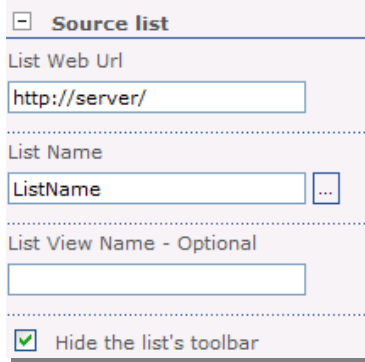

This section provides you with the option to show errors when the web part is not working properly (for debug & support purposes).

Check this option to view error details and uncheck it if these details do not need to be shown.

## Source List

The screenshot shows a configuration form titled "Source list" with a collapse icon. It contains the following fields and options:

- List Web Url:** A text input field containing "http://server/".
- List Name:** A text input field containing "ListName" and a small square icon with three dots to its right.
- List View Name - Optional:** An empty text input field.
- Hide the list's toolbar:** A checked checkbox.

This section includes Remote List connection details:

- List Web URL- SharePoint List web address - enter the URL without the List Name.  
You can type relative links and also use the following tokens: [current site], [site collection], [server].
- List Name - SharePoint List name - enter the full List name.
- List View Name (optional) - Remote List View Name - here you can enter a specific List View name to show in default.
- Hide the list's toolbar (optional)- check this checkbox if you want to hide the remote list's toolbar.
